About Accounting Software and Inventory

The *Inventory Management System* sufficiently to determine the feasibility and usability of a finished system. The core concept is to track the sale of items from the cash registers with additional features for interpreting the data. It uses a client-server model with a connected database to allow multiple stores and warehouses to be connected. This allows for later expansion while still supporting the targeted small businesses

Advantages Of Accounting Software and Inventory

- **Simplifying data entry** – inputting data is fast, straightforward and only needs to be carried out once
- **Speeding up processes** – eg reducing delays between making a sale and generating an invoice
- **Automating reports and analysis** - on profit and loss, debtors and creditors, customer accounts, inventory counts, sales, forecasting, etc
- **Automating tasks** – such as calculating pay, producing payslips, automatically calculating VAT, etc
- **Reducing errors** – by computerising calculations that would have historically been done manually
- **Supporting other functions**, such as online banking and e-filing

Disadvantages Of Accounting Software and Inventory

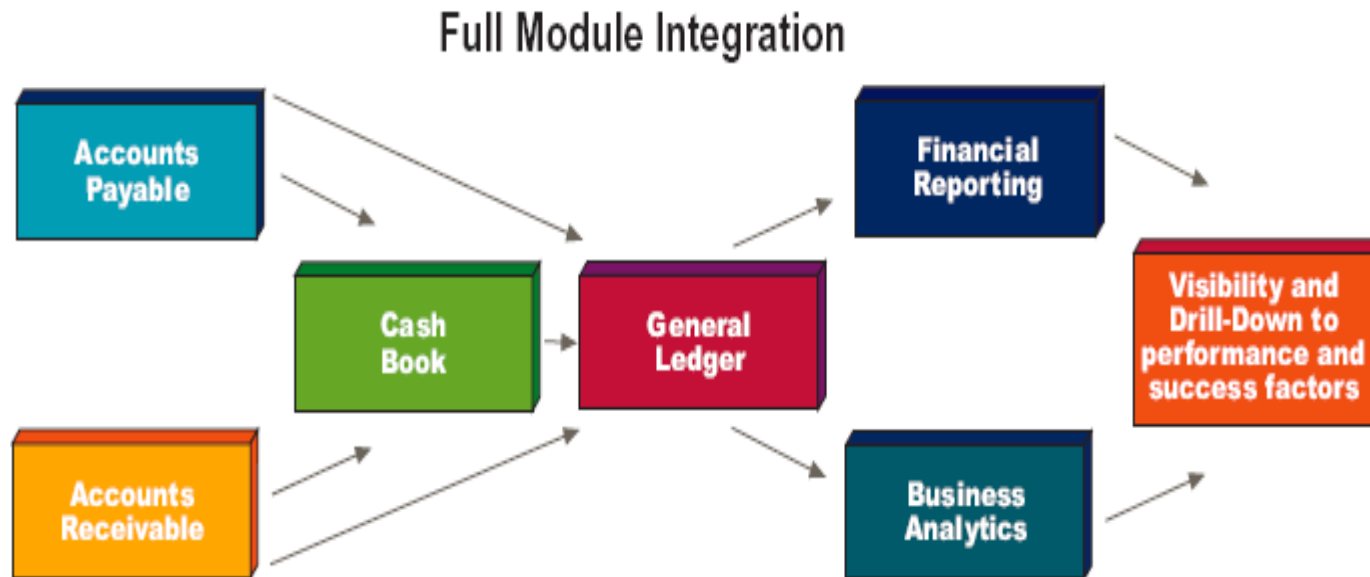

- **Price** - the package cost, although small in relation to your other costs, is higher than a paper-based system.
- **Implementation** - you will probably need some initial help setting up an accounts package. This will usually be a chargeable service, perhaps obtained from your accountant or the system provider.
- **Support** - you may need to purchase yearly maintenance and support for your package.
- **Specialised needs** - an accounts package is designed to suit most types of business. However, if your business is very unusual you may find that you need to change the way you operate to suit the package, or pay to have the package adapted to suit your needs.
